

Domain Controller Üzerinde Politika Yapılandırma

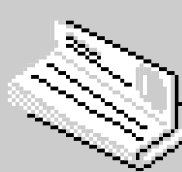

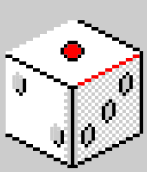

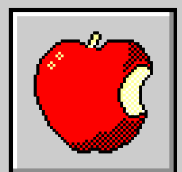

Domain Controller sunucumda Server Manager'ı açtım.

Sağ üst köşeden Tools'u açtım.

Öncelikle bir domain'e kattım bilgisayarımı Forest: [sizin_domain_adiniz] -
> Domains -> [sizin_domain_adiniz] yolunu izledim

11:11PM

Daha sonrasında domain'in altında bulunan kısımdan Default Domain Policy'e sağ tıklayarak edit dedim ve oradan Computer Configuration (Bilgisayar Yapılandırması) -> Policies (İlkeler) -> Windows Settings (Windows Ayarları) -> Security Settings (Güvenlik Ayarları) -> Account Policies (Hesap İlkeleri) -> Password Policy (Parola İlkesi) yolunu izledim ve politikayı düzenledim. Politikada parola uzunluğu, karmaşık gereksinimlerini, en fazla parolanın ne zamana kadar geçerli olduğu, son beş şifreden birini yeni şifre olarak ayarlayamamız gibi politikaları belirledim.
